LAB 3 --. SCRUM

Describe the problems or challenges that you can think of when we apply scrum in our software development project.

The possible problems are

- Time estimation problem, sometimes the project might take longer than the expected time

We can solve this problem by applying planning poker techniques i.e., the project owner should give a chance to people to estimate time

- It highly depends on the communication between members

We can solve this by encouraging members to speak up about their views and ideas

- We use Scrum, but we have these unique circumstances, so we have had to modify Scrum, so it works here

We can solve this problem by applying scrum from the book, so you learn the basic agile principles

- The product owner role is difficult to

We can solve this problem by creating project owner teams
